EDUCATION

Carnegie Mellon University M.E.T., Entertainment Technology Center — Aug 2025 – May 2027

University of Southern California B.S. Computer Science (Games) — Aug 2021 – Dec 2024

EXPERIENCE

37 Interactive Entertainment — *Douluo Continent: Soul Master Duel* Client Developer Intern — Jun 2023 – Aug 2023

- Integrated new live-version assets in Unity and scripts, and implemented interaction logic for limited-time events and system UI in a live commercial mobile game
- Diagnosed and fixed client–server errors from backend requests; gained hands-on experience with live-ops release cycles and cross-team collaboration

PROJECTS

SpellChemists CMU ETC | Tech Designer / Programmer | 2P Tabletop Battler — Aug 2026 – Present

- Built an Excel / Google Sheet → CSV → ScriptableObject data pipeline and importer driving all stats for 25 spells and 2 classes, with multi-version tables, header-alias matching, in-place updates by ID (stable GUIDs and references) and sheet consistency checks
- Designed a composable spell-effect system with [SerializeReference] (damage, shields, element infliction, knockback, persistent zones), defining triggers, targets and resolution order; every spell is pure data with no per-ID code
- Wrote a custom Inspector and batch effect generator, plus an on-device runtime level editor for placing, scaling and rotating power-up zones on the touch table, with JSON-saved layouts exported into builds and randomized each match

It Takes 2 Alices CMU ETC Semester Project | Programmer — Jan 2026 – May 2026

- 2-player co-op programming puzzle game on the Tilt Five tabletop AR platform, inspired by Alice 3, introducing kids to coding
- Implemented puzzle mechanics and two-player interaction, turning concepts like while loops, data types and logic gates into playable level mechanics

projects.etc.cmu.edu/it-takes-two-alices

The Lake Minnewaska USC AGP | Gameplay Programmer / Designer | On Steam — Jul 2023 – May 2024

- Designed and built the core fishing loop — cast, hook, reel — plus the fish-fight stamina and QTE systems
- Tuned stamina drain, QTE timing and other feel parameters through iterative playtests and experiments
- Implemented world interactions including fishing-spot activation and the fishing journal

store.steampowered.com/app/2858430/Lake_Minnewaska

Building Virtual Worlds CMU ETC Rapid Prototyping | Programmer — Aug 2025 – Dec 2025

- 4 prototypes in 1–2 week sprints with random teams, using Xbox Adaptive Controller, Quest 3 hand tracking and PhidgetSpatial sensors, plus a multiplayer party brawler (snowball pushing, flying kicks, random bombs)

A Lone Mask: Trial Global Game Jam | Game Designer / QA — Jan 2026

- Designed branching dialogue and NPC reactions; tested every branch so all endings were reachable

SKILLS

Design	Spell & combat system design, effect resolution rules, core-loop breakdown, game-feel tuning, playtesting
Data	Excel / Google Sheet, CSV, JSON; ScriptableObject data architecture; Unity Editor tools (importers, custom Inspectors, batch tools)
Code	C# (Unity, proficient), C/C++, Python, Java; reinforcement learning basics (Q-Learning, Gym)
Platforms	Unity 2D/3D; PC, Meta Quest 3, Tilt Five, Xbox Adaptive Controller
Other	Git, Perforce; native Mandarin, fluent English
